this laboratory reference compiles the essential protocols used in cyanobacterial research cyanobacteria is a model system for biofuel production and sequestration of carbon dioxide to tackle global climate change due to increasing levels of greenhouse gases topics range from identification and growth parameters to biomolecule estimation and isolation it also covers genome analysis and bioengineering of cyanobacteria for novel products key features provides step by step procedures and troubleshooting tips covers identification growth parameters and pigment estimation methodologies describes isolation characterization and purification of microcystin phycobiliproteins and scytonemin from cyanobacteria discusses genomics proteomics and bioengineering of cyanobacteria from novel products explains sample preparation and visualization protocol for electron microscopy based analysis of cyanobacteria this collection is useful to students and researchers in life sciences it is also meant for industry experts who are involved in the production of biofuels biofertilizers other value added products and carbon sequestration using cyanobacteria

this volume comprehensively covers techniques that use activity based proteomics to investigate biological functions of proteins such as lipolytic enzymes serine hydrolases chitinases and glycoside hydrolases the chapters in this book cover a wide range of protocols and an overview on the application of activity based proteomics profiling to study deisylating enzymes serine hydrolases monooxygenases ubiquitin e3 ligases and reactive cysteine in various organisms including bacteria viruses and mammalian cells and tissues furthermore this book provides

updated comprehensive protocols for utilizing activity based proteomics profiling to discover new enzymes detect novel modifications and identify new drug therapy targets written in the highly successful methods in molecular biology series format chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls cutting edge and comprehensive activity based proteomics methods and protocols is a valuable resource for all researchers who are interested in applying the latest technologies in this advancing field

we are now entering the third decade of the 21st century and especially in the last years the achievements made by scientists have been exceptional leading to major advancements in the fast growing field of veterinary pharmacology and toxicology frontiers has organized a series of research topics to highlight the latest advancements in research across the specialty of veterinary pharmacology and toxicology with articles from the members of our accomplished editorial boards this editorial initiative of particular relevance led by dr arturo anadon specialty chief editor of the veterinary pharmacology and toxicology section is focused on new insights novel developments new tools for researchers current challenges latest discoveries recent advances and future perspectives in the area of veterinary pharmacology and toxicology pharmacology and toxicology are translational sciences pharmacology translates fundamental insights into drug action and fate into clinical therapy toxicology translates science transferring knowledge from fundamental science into practical applications to safeguard animal health human health and the environment nowadays veterinary pharmacology and toxicology should be regarded as disciplines contributing to the paradigm one health reducing risk at the animal human ecosystems interface

this detailed volume presents state of the art techniques in ocular regeneration research pulling together recent animal model systems identifying key genes and regulatory networks that contribute to the regenerative response as well as advances in induced pluripotent stem cell ipsc biology the book opens with a section on the anterior segment and key models and techniques utilized to study the cornea lens and trabecular meshwork and continues with chapters on the posterior segment and largely the retina and retinal pigment epithelium rpe with techniques developed in a variety of model systems to study regeneration of these tissues the concluding part examines novel technologies utilized in ocular regeneration research written for the highly successful methods in molecular biology series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step and readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls authoritative and practical ocular regeneration methods and protocols serves as an ideal guide for researchers aiming to expand the boundaries of what we know about this vital area of physiology

this volume explores the cutting edge of proximity dependent protein biotinylation approaches focusing on innovative biotin ligase biotin and peroxidase based methods like apex spanning a diverse array of biological systems including bacteria zebrafish plants and mammals this collection showcases methods that aid in the identification of protein interactions localization membrane topology trafficking and secretion dynamics additionally the book features applications at the host microbe interface and for the use of tissue specific biotinylation for studying interorgan communication as well as in silico validation methods written for the highly successful methods in molecular biology series chapters include introductions to their respective topics detailed lists of the necessary materials and reagents step by step and readily reproducible laboratory protocols and expert tips for troubleshooting and avoiding known pitfalls authoritative and practical proximity dependent protein biotinylation methods and protocols serves as an essential guide for researchers advancing the study of proteome biology
