a gateway to higher mathematics integrates the process of teaching students how to do proofs into the framework of displaying the development of the real number system the text eases the students into learning how to construct proofs while preparing students how to cope with the type of proofs encountered in the higher level courses of abstract algebra analysis and number theory after using this text the students will not only know how to read and construct proofs they will understand much about the basic building blocks of mathematics the text is designed so that the professor can choose the topics to be emphasized while leaving the remainder as a reference for the students

linear algebra gateway to mathematics uses linear algebra as a vehicle to introduce students to the inner workings of mathematics the structures and techniques of mathematics in turn provide an accessible framework to illustrate the powerful and beautiful results about vector spaces and linear transformations the unifying concepts of linear algebra reveal the analogies among three primary examples euclidean spaces function spaces and

collections of matrices students are gently introduced to abstractions of higher mathematics through discussions of the logical structure of proofs the need to translate terminology into notation and efficient ways to discover and present proofs application of linear algebra and concrete examples tie the abstract concepts to familiar objects from algebra geometry calculus and everyday life students will finish a course using this text with an understanding of the basic results of linear algebra and an appreciation of the beauty and utility of mathematics they will also be fortified with a degree of mathematical maturity required for subsequent courses in abstract algebra real analysis and elementary topology students who have prior background in dealing with the mechanical operations of vectors and matrices will benefit from seeing this material placed in a more general context

if we want our students to be prepared for a life involved with artificial intelligence global awareness cultural understanding racial religious and lifestyle diversity and changing economic and political realities then we have to change what we are doing in our schools from pre school to graduate school we can no longer wait for large scale reforms to develop because those reforms will only occur due to some kind of tragedy if schools are going to reform proactively educators in each school and in each district have to lead the way

the board on science education and the board on mathematical sciences and analytics of the national academies of sciences engineering and medicine convened the workshop on increasing student success in developmental mathematics on march 18 19 2019 the workshop explored how to best support all students in postsecondary mathematics with particular attention to students who are unsuccessful in developmental mathematics and with an eye toward issues of access to promising reforms and equitable learning environments the two day workshop was designed to bring together a variety of stakeholders including experts who have developed and or implemented new initiatives to improve the mathematics education experience for students the overarching goal of the workshop was to take stock of the mathematics education community s progress in this domain participants examined the data on students who are well served by new reform structures in developmental mathematics and discussed various cohorts of students who are not currently well served those who even with access to reforms do not succeed and those who do not have access to a reform due to differential access constraints throughout the workshop participants also explored promising approaches to bolstering student outcomes in mathematics focusing especially on research and data that demonstrate the success of these approaches deliberated and discussed barriers and opportunities for effectively serving all students and outlined some key directions of inquiry intended to address the prevailing research and data needs in the field this publication summarizes the presentations and discussion of the workshop

the field of stem higher education is currently grappling with the imperative need for transformative discourse to address its historical epistemological and colonial underpinnings despite significant advancements in stem disciplines there remains a critical gap in inclusivity and equity within higher educational institutes recent studies have highlighted the persistent colonial structures that shape stem education often marginalizing diverse voices and perspectives efforts to decolonize stem education are gaining momentum yet there is a pressing need for comprehensive research and reflective insights to uproot these entrenched structures this research topic aims to address these gaps by fostering a robust dialogue that transcends traditional boundaries

promoting a deeper understanding of the challenges and opportunities in reshaping stem education through decolonial lenses this research topic aims to provide a scholarly platform for researchers educators and practitioners to contribute groundbreaking research and reflective insights on decolonizing stem higher education the primary goal is to facilitate a robust dialogue that transcends traditional boundaries fostering a deeper understanding of the challenges and opportunities in reshaping stem education through decolonial lenses
