brain damage due to stroke traumatic brain injury tbi progressive neurological disease and other

etiologies is extremely common worldwide neurogenic language disorders that result from the illnesses accidents or progressive diseases that cause brain damage can negatively impact an individual's communicative and cognitive well-being. This thoughtful text provides speech language pathologists and related health care professionals with a comprehensive examination of the concepts and procedures surrounding the management of adult neurogenic disorders. Information is provided on the major disorders including aphasia, traumatic brain injury, right hemisphere disorders, and dementia, and assessment procedures and treatment approaches are discussed. In addition, clinical issues both theoretical and applied are highlighted throughout the book, making this an excellent choice for anyone working with neurogenic language disorders.

This handbook is designed to provide authoritative information to the psychologist working in primary care settings and to those seeking to learn about clinical issues in such settings. Scholarly and at the same time practical, this volume offers both the clinician and the researcher a wide-ranging look at the contexts in which psychological services become of paramount importance to the health of the patient. The handbook will cover the prevalent psychological conditions in the primary care setting: depression, anxiety, somatization, eating disorders, and alcoholism. Illnesses in which psychological disorders play a major role, such as heart disease, diabetes, cancer, pain management, headache, asthma, low back pain, sleep disorders, among others, and issues of concern to psychologists treating children (ADHD, disciplinary problems, etc.), treating women (abuse, infertility, menopause, sexual dysfunction), treating men (workaholic, alcoholism, sexual dysfunction), and treating the older patient (death and dying, cognitive impairment, late life depression) are also covered. Other important topics include psychological side effects of common medications, resistance to treatment, spiritual concerns in the treatment of patients, cultural differences in healing, suicide, AIDS, prevention of disease, and many others. Leonard Haas is a noted authority in the area of primary care psychology and has recruited expert contributors for the 41 chapters and two appendices that make up this definitive handbook for a growing and important subspecialty in clinical psychology. The work may also be used in graduate courses in health psychology.

Psychological testing has grown exponentially as technological advances have permitted it to, and societal complexities have necessitated its growth. Psychological testing or psychological assessment is a field characterised by the use of samples of behaviour in order to infer generalisations about a given individual by samples of behaviour. One means of observations over time of an individual performing tasks that have usually been prescribed beforehand. These responses are often compiled into statistical tables that allow the evaluator to compare the behaviour of the individual being tested to the responses of a norm group. The broad categories of psychological evaluation tests include norm-referenced IQ achievement tests, neuropsychological tests, personality tests, objective tests, rating scale, direct observation tests, psychological evaluations using data mining. New and important research is presented in this book.
